Marketing Channel Performance Analysis

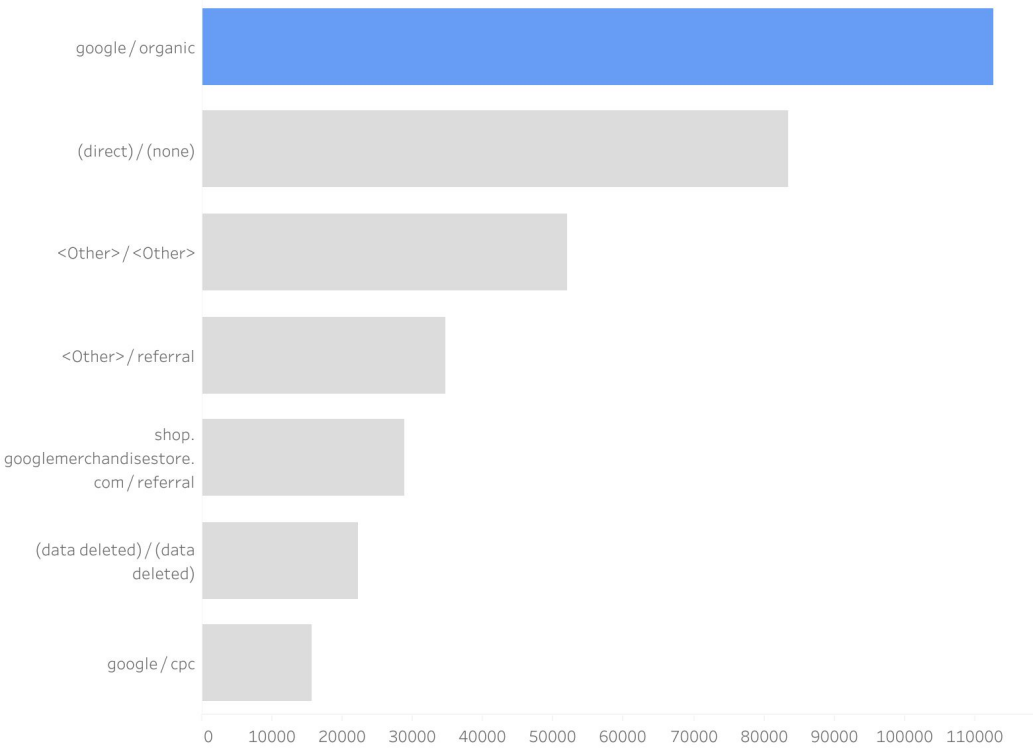
Evaluating Traffic Volume vs Quality Contribution

Business Questions

1. Which channels drive the most traffic?
2. Which channels generate the highest quality sessions?
3. Are volume and quality aligned?

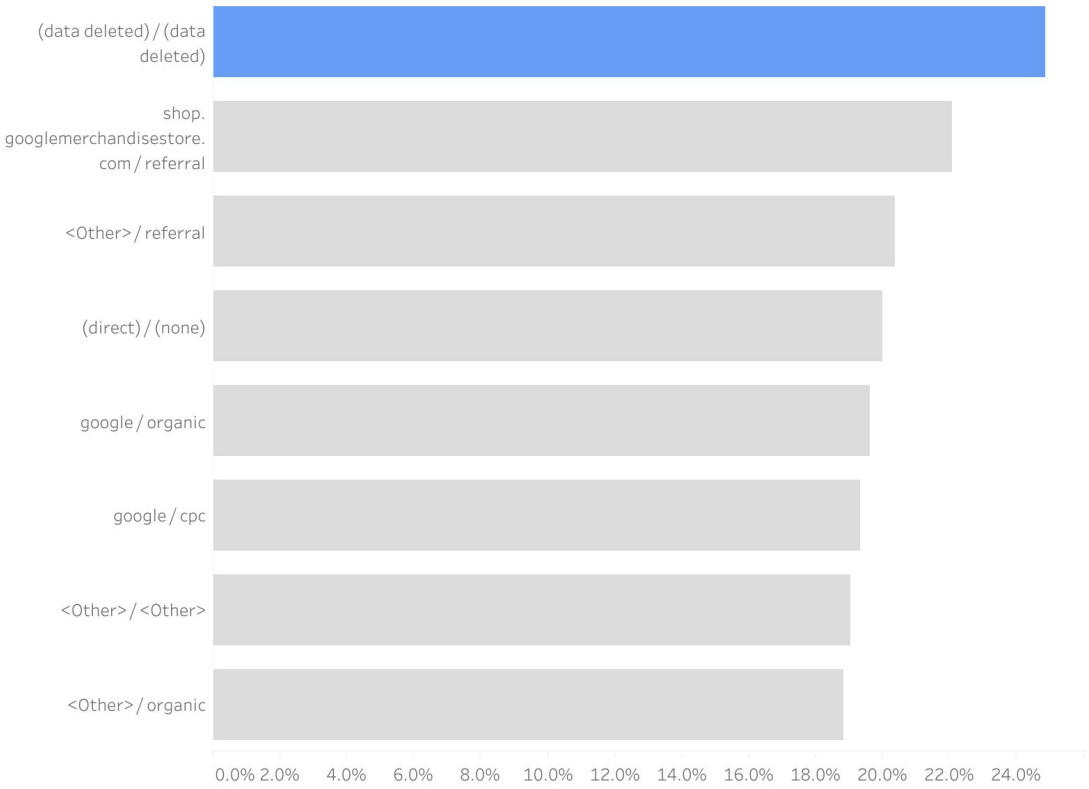
Google & Direct Account for Over Half of Traffic

- Google/Organic – **30%**
- Direct – 23%
- Referral – 10%



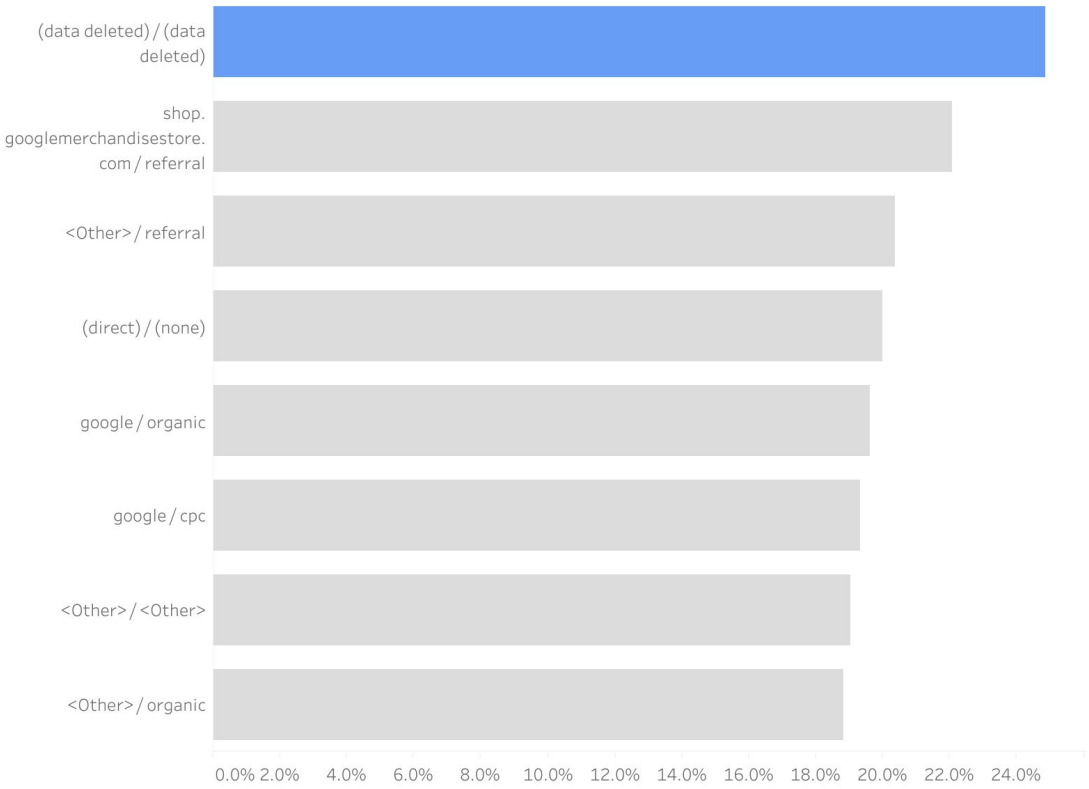
Smaller Channels Deliver Higher Quality Rates

- Data Deleted– **25%**
- Shop Referral – 22%
- Referral – 20%

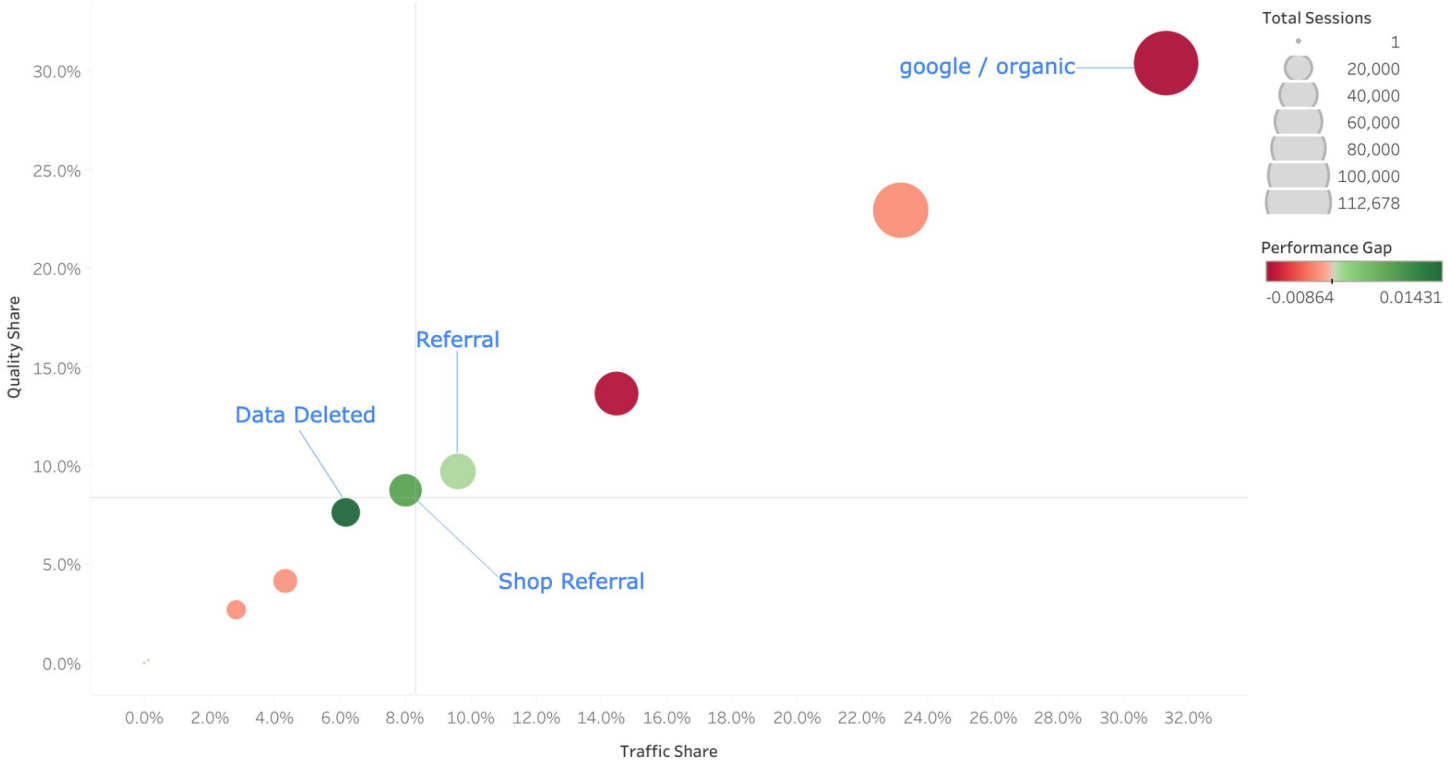


Traffic Allocation Slightly Misaligned with Quality Output

- Data Deleted– **25%**
- Shop Referral – 22%
- Referral – 20%



High Traffic Does Not Equal High Quality



Strategic Implications

- Google / organic drives 31% of traffic but under-indexes on quality
- Direct traffic shows similar underperformance
- Referral and Shop Referral generate higher relative efficiency
- Opportunity: Shift optimisation focus toward higher-yield segments

What I Would Test Next

- **Improve Organic Quality**
  Segment by intent & landing page to identify low-yield traffic sources
- **Investigate Direct Attribution**
  Assess whether traffic is misclassified or low-intent
- **Scale High-Performing Referrals**
  Double down on efficient referral sources
- **Model Budget Reallocation**
  Simulate shifting spend toward higher-yield channels
